

7 Days safari to chebera churchura national park a rich and untouched wilderness and culture

Chebera Churchura National Park found within the western side of the central Omo Gibe basin, in between Dawro zone and Konta Special Woreda of the Southwestern Ethiopia. The park is located about 330 & 460 km southwest of Hawassa & Addis Ababa, respectively. It covers an area of 1215 km² that ranges in altitude from 700 to 2450 m.a.s.l. Unique and very attractive topography

The Park is fortunate in possessing numerous rivers and streams and four small creator lakes (Keriballa, Shasho, Koka) which are reason for the rich wildlife resources of the area. Zigina River is rises from the north east highlands of the area and cross the central part of the park (north to south) and feeds the Omo River (there are also different perennial rivers feeding Omo River crossing the park).

Shoshuma River is rises from the north western highlands of the Konta area highlands cross the north eastern part of the park and mixed with Zigina River inside the park, which go down together to Omo River. The prominent topographic features is unique & highly attractive and characterized by unique and highly heterogeneous and hilly terrain, few flat lands and highly undulating to rolling plains with incised river and perennial streams, valley and gorges.
